CHAPTER I

THE MUSKRATS ARE BUILDING

We have had a series of long, heavy rains, and water is standing over the swampy meadow. It is a dreary stretch, this wet, sedgy land in the cold twilight, drearier than any part of the woods or the upland pastures. They are empty, but the meadow is flat and wet, naked and all unsheltered. And a November night is falling.

The darkness deepens. A raw wind is rising. At nine o’clock the moon swings round and full to the crest of the ridge, and pours softly over. I button the heavy ulster close, and in my rubber boots go down to the river and follow it out to the middle of the meadow, where it meets the main ditch at the sharp turn toward the swamp. Here at the bend, behind a clump of black alders, I sit quietly down and wait.

I am not mad, nor melancholy; I am not after copy. Nothing is the matter with me. I have come out to the bend to watch the muskrats building, for that small
mound up the ditch is not an old haycock, but a half-finished muskrat house.

The moon climbs higher. The water on the meadow shivers in the light. The wind bites through my heavy coat and sends me back, but not until I have seen one, two, three little figures scaling the walls of the house with loads of mud-and-reed mortar. I am driven back by the cold, but not until I know that here in the desolate meadow is being rounded off a lodge, thick-walled and warm, and proof against the longest, bitterest of winters.

This is near the end of November. My wood is in the cellar; I am about ready to put on the double windows and storm doors; and the muskrats’ house is all but finished. Winter is at hand: but we are prepared, the muskrats even better prepared than I, for theirs is an adequate house, planned perfectly.

Throughout the summer they had no house, only their tunnels into the sides of the ditch, their roadways out into the grass, and their beds under the tussocks or among the roots of the old stumps. All these months the water had been low in the ditch, and the beds among the tussocks had been safe and dry enough.

Now the autumnal rains have filled river and ditch, flooded the tunnels, and crept up into the beds under the tussocks. Even a muskrat will creep out of his bed when cold, wet water creeps in. What shall he do for a house? He does not want to leave his meadow. The only thing to do is to build,—move from under the tussock, out upon the top, and here, in the deep, wiry grass, make a new bed, high and dry above the rising
THE MUSKRATS ARE BUILDING

water, and close the new bed in with walls that circle and dome and defy the winter.

Such a house will require a great deal of work to build. Why not combine, make it big enough to hold half a dozen, save labor and warmth, and, withal, live sociably together? So they left, each one his bed, and joining efforts, started, about the middle of October, to build this winter house.

Slowly, night after night, the domed walls have been rising, although for several nights at a time there would be no apparent progress with the work. The builders were in no hurry, it seems; the cold was far off; but it is coming, and to-night it feels near and keen. And to-night there is no loafing about the lodge.

When this house is done, then the rains may descend, and the floods come, but it will not fall. It is built upon a tussock; and a tussock, you will know, who have ever grubbed at one, has hold on the bottom of creation. The winter may descend, and the boys, and foxes, come,—and they will come, but not before the walls are frozen,—yet the house stands. It is boy-proof, almost; it is entirely rain-, cold-, and fox-proof. Many a time I have hacked at its walls with my axe when fishing through the ice, but I never got in. I have often seen, too, where the fox has gone round and round the house in the snow, and where, at places, he has attempted to dig into the frozen mortar; but it was a foot thick, as hard as flint, and utterly impossible for his pick and shovel.

Yet strangely enough the house sometimes fails of the very purpose for which it was erected. I said the
floods may come. So they may, ordinarily; but along in
March when one comes as a freshet, it rises sometimes
to the dome of the house, filling the single bedchamber
and drowning the dwellers out. I remember a freshet
once in the end of February that flooded Lupton’s Pond
and drove the muskrats of the whole pond village to their
ridgepoles, to the bushes, and to whatever wreckage the
waters brought along.

The best laid schemes o’ muskrats too
Gang aft a-gley.

But ganging a-gley is not the interesting thing, not the
point with my muskrats: it is rather that my muskrats,
and the mice that Burns ploughed up, the birds and the
bees, and even the very trees of the forest, have foresight.
They all look ahead and provide against the coming
cold. That a mouse, or a muskrat, or even a bee, should
occasionally prove foresight to be vain, only shows
that the life of the fields is very human. Such foresight,
however, oftener proves entirely adequate for the winter,
dire as some of the emergencies are sure to be.

The north wind doth blow,
And we shall have snow,
And what will Robin do then,
Poor thing?

And what will Muskrat do? and Chipmunk? and
Whitefoot? and little Chickadee? poor things! Never
fear. Robin has heard the trumpets of the north wind
and is retreating leisurely toward the south, wise thing!
Muskrat is building a warm winter lodge; Chipmunk
has already dug his but and ben, and so far down under
The Muskra
tes Building

the stone wall that a month of zeros could not break in; Whitefoot, the woodmouse, has stored the hollow poplar stub full of acorns, and has turned Robin’s deserted nest, near by, into a cozy house; and Chickadee, dear thing, Nature herself looks after him. There are plenty of provisions for the hunting, and a big piece of suet on my lilac bush. His clothes are warm, and he will hide his head under his wing in the elm-tree hole when the north wind doth blow, and never mind the weather.

I shall not mind it either, not so much, anyway, on account of Chickadee. He lends me a deal of support. So do Chipmunk, Whitefoot, and Muskrat.

This lodge of my muskrats in the meadow makes a difference, I am sure, of at least ten degrees in the mean temperature of my winter. How can the out-of-doors freeze entirely up with such a house as this at the middle of it? For in this house is life, warm life,—and fire. On the coldest day I can look out over the bleak white waste to where the house shows, a tiny mound in the snow, and I can see the fire burn, just as I can see and feel the glow when I watch the slender blue wraith rise into the still air from the chimney of the old farmhouse along the road below. For I share in the life of both houses; and not less in the life of the mud house of the meadow, because, instead of Swedes, they are muskrats who live there. I can share the existence of a muskrat? Easily. I like to curl up with the three or four of them in that mud house and there spend the worst days of the winter. My own big house here on the hilltop is sometimes cold. And the wind! If sometimes I could only drive the insistent winter wind from the
house corners! But down in the meadow the house has no corners; the mud walls are thick, so thick and round that the shrieking wind sweeps past unheard, and all unheeded the cold creeps over and over the thatch, then crawls back and stiffens upon the meadow.

The doors of our house in the meadow swing open the winter through. Just outside the doors stand our stacks of fresh calamus roots, and iris, and arum. The roof of the universe has settled close and hard upon us,—a sheet of ice extending from the ridge of the house far out to the shores of the meadow. The winter is all above the roof—outside. It blows and snows and freezes out there. In here, beneath the ice-roof, the roots of the sedges are pink and tender; our roads are all open and they run every way, over all the rich, rooty meadow.

The muskrats are building. Winter is coming. The muskrats are making preparations, but not they alone. The preparation for hard weather is to be seen everywhere, and it has been going on ever since the first flocking of the swallows back in July. Up to that time the season still seemed young; no one thought of harvest, of winter;—when there upon the telegraph wires one day were the swallows, and work against the winter had commenced.

The great migratory movements of the birds, mysterious in some of their courses as the currents of the sea, were in the beginning, and are still, for the most part, mere shifts to escape the cold. Why in the spring these same birds should leave the southern lands of plenty and travel back to the hungrier north to nest,
is not easily explained. Perhaps it is the home instinct that draws them back; for home to birds (and men) is the land of the nest. However, it is very certain that among the autumn migrants there would be at once a great falling off should there come a series of warm open winters with abundance of food.

Bad as the weather is, there are a few of the seed-eating birds, like the quail, and some of the insect-eaters, like the chickadee, who are so well provided for that they can stay and survive the winter. But the great majority of the birds, because they have no storehouse nor barn, must take wing and fly away from the lean and hungry cold.

And I am glad to see them go. The thrilling honk of the flying wild geese out of the November sky tells me that the hollow forests and closing bays of the vast desolate north are empty now, except for the few creatures that find food and shelter in the snow. The wild geese pass, and I hear behind them the clang of the arctic gates, the boom of the bolt—then the long frozen silence. Yet it is not for long. Soon the bar will slip back, the gates will swing wide, and the wild geese will come honking over, swift to the greening marshes of the arctic bays once more.

Here in my own small woods and marshes there is much getting ready, much comforting assurance that Nature is quite equal to herself, that winter is not approaching unawares. There will be great lack, no doubt, before there is plenty again; there will be suffering and death. But what with the migrating, the
strange deep sleeping, the building and harvesting, there will be also much comfortable, much joyous and sociable living.

Long before the muskrats began to build, even before the swallows commenced to flock, my chipmunks started their winter stores. I don't know which began his work first, which kept harder at it, chipmunk or the provident ant. The ant has come by a reputation for thrift, which, though entirely deserved, is still not the exceptional virtue it is made to seem. Chipmunk is just as thrifty. So is the busy bee. It is the thought of approaching winter that keeps the bee busy far beyond her summer needs. Much of her labor is entirely for the winter. By the first of August she has filled the brood chamber with honey—forty pounds of it, enough for the hatching bees and for the whole colony until the willows tassel again. But who knows what the winter may be? How cold and long drawn out into the coming May? So the harvesting is pushed with vigor on to the flowering of the last autumn asters—on until fifty, a hundred, or even three hundred pounds of surplus honey are sealed in the combs, and the colony is safe should the sun not shine again for a year and a day.

But here is Nature, in these extra pounds of honey, making preparation for me, incapable drone that I am. I could not make a drop of honey from a whole forest of linden bloom. Yet I must live, so I give the bees a bigger gum log than they need; I build them greater barns; and when the harvest is all in, this extra store I make my own. I too with the others am getting ready for the cold.
It is well that I am. The last of the asters have long since gone; so have the witch-hazels. All is quiet about the hives. The bees have formed into their warm winter clusters upon the combs, and except “when come the calm, mild days,” they will fly no more until March or April. I will contract their entrances,—put on their storm-doors. And now there is little else that I can do but put on my own.

The whole of my out-of-doors is a great hive, stored and sealed for the winter, its swarming life close-clustered, and covering in its centre, as coals in the ashes, the warm life-fires of summer.

I stand along the edge of the hillside here and look down the length of its frozen slope. The brown leaves have drifted into the entrances, as if every burrow were forsaken; sand and sticks have washed in, too, littering and choking the doorways.

There is no sign of life. A stranger would find it hard to believe that my whole drove of forty-six ground hogs (woodchucks) are gently snoring at the bottoms of these old uninteresting holes. Yet here they are, and quite out of danger, sleeping the sleep of the furry, the fat, and the forgetful.

The woodchuck’s is a curious shift, a case of Nature outdoing herself. Winter spreads far and fast, and Woodchuck, in order to keep ahead out of danger, would need wings. But he wasn’t given any. Must he perish then? Winter spreads far, but does not go deep—down only about four feet; and Woodchuck, if he cannot escape overland, can, perhaps, underland.
So down he goes through the winter, down into a mild and even temperature, five long feet away—but as far away from the snow and cold as Bobolink among the reeds of the distant Orinoco.

Indeed, Woodchuck’s is a farther journey and even more wonderful than Bobolink’s, for these five feet carry him beyond the bounds of time and space into the mysterious realm of sleep, of suspended life, to the very gates of death. That he will return with Bobolink, that he will come up alive with the spring out of this dark way, is very strange.

For he went in most meagrely prepared. He took nothing with him, apparently. The muskrat built him a house, and under the spreading ice turned all the meadow into a well-stocked cellar. The beaver built a dam, cut and anchored under water a plenty of green sticks near his lodge, so that he too would be under cover when the ice formed, and have an abundance of tender bark at hand. Chipmunk spent half of his summer laying up food near his underground nest. But Woodchuck simply digged him a hole, a grave, then ate until no particle more of fat could be got into his baggy hide, and then crawled into his tomb, gave up the ghost, and waited the resurrection of the spring.

This is his shift! This is the length to which he goes, because he has no wings, and because he cannot cut, cure, and mow away in the depths of the stony hillside, enough clover hay to last him over the winter. The beaver cans his fresh food in cold water; the chipmunk selects long-keeping things and buries them; the woodchuck
makes of himself a silo, eats all his winter hay in the
summer while it is green, turns it at once into a surplus
of himself, then buries that self, feeds upon it, and
sleeps—and lives!

The north wind doth blow,
And we shall have snow,

but what good reason is there for our being daunted at
the prospect? Robin and all the others are well prepared.
Even the wingless frog, who is also lacking in fur and
feathers and fat, even he has no care at the sound of the
cold winds. Nature provides for him too, in her way,
which is neither the way for the robin, the muskrat, nor
the woodchuck. He survives, and all he has to do about
it is to dig into the mud at the bottom of the ditch. This
looks at first like the journey Woodchuck takes. But it
is really a longer, stranger journey than Woodchuck’s,
for it takes the frog far beyond the realms of mere sleep,
on into the cold, black land where no one can tell the
quick from the dead.

The frost may or may not reach him here in the
ooze. No matter. If the cold works down and freezes
him into the mud, he never knows. But he will thaw
out as good as new; he will sing again for joy and love
as soon as his heart warms up enough to beat.

I have seen frogs frozen into the middle of solid
lumps of ice in the laboratory. Drop the lump on the
floor, and the frog would break out like a fragment of
the ice itself. And this has happened more than once to
the same frog without causing him the least apparent
THE LAY OF THE LAND

suffering or inconvenience. He would come to, and croak, and look as wise as ever.

The north wind may blow, but the muskrats are building; and it is by no means a cheerless prospect, this wood-and-meadow world of mine in the gray November light. The frost will not fall to-night as falls the plague on men; the brightness of the summer is gone, yet this chill gloom is not the sombre shadow of a pall. Nothing is dying in the fields: the grass-blades are wilting, the old leaves are falling, but no square foot of greensward will the winter kill, nor a single tree perhaps in my wood-lot. There will be no less of life next April because of this winter, unless, perchance, conditions altogether exceptional starve some of the winter birds. These suffer most; yet as the seasons go, life even for the winter birds is comfortable and abundant.

The fence-rows and old pastures are full of berries that will keep the fires burning in the quail and partridge during the bitterest weather. Last February, however, I came upon two partridges in the snow, dead of hunger and cold. It was after an extremely long severe spell. But this was not all. These two birds since fall had been feeding regularly in the dried fodder corn that stood shocked over the field. One day all the corn was carted away. The birds found their supply of food suddenly cut off, and, unused to foraging the fence-rows and tangles for wild seeds, they seem to have given up the struggle at once, although within easy reach of plenty.

Hardly a minute’s flight away was a great thicket
THE MUSKRATS ARE BUILDING

of dwarf sumac covered with berries; there were bayberries, rose hips, green brier, bittersweet, black alder, and checkerberries—hillsides of the latter—that they might have found. These were hard fare, doubtless, after an unstinted supply of sweet corn; but still they were plentiful, and would have been sufficient had the birds made use of them.

The smaller birds of the winter, like the tree sparrow and junco, feed upon the weeds and grasses that ripen unmolested along the roadsides and waste places. A mixed flock of these small birds lived several days last winter upon the seeds of the ragweed in my mowing. The weeds came up in the early fall after the field was laid down to clover and timothy. They threatened to choke out the grass. I looked at them, rising shoulder-high and seedy over the greening field, and thought with dismay of how they would cover it by the next fall. After a time the snow came, a foot and a half of it, till only the tops of the seedy ragweeds showed above the level white; then the juncos, goldfinches, and tree sparrows came, and there was a five-day shucking of ragweed-seed in the mowing, and five days of life and plenty.

Then I looked and thought again—that, perhaps, into the original divine scheme of things were put even ragweeds. But then, perhaps, there was no original divine scheme of things. I don’t know. As I watch the changing seasons, however, across the changeless years, I seem to find a scheme, a plan, a purpose, and there are weeds and winters in it, and it seems divine.
The muskrats are building; the last of the migrating geese have gone over; the wild mice have harvested their acorns; the bees have clustered; the woodchucks are asleep; and the sap in the big hickory by the side of the house has crept down out of reach of the fingers of the frost. I will put on the storm-doors and the double windows. Even now the logs are blazing cheerily on the wide, warm hearth.
On the night before this particular Christmas every creature of the woods that could stir was up and stirring, for over the old snow was falling swiftly, silently, a soft, fresh covering that might mean a hungry Christmas unless the dinner were had before morning.

But when the morning dawned, a cheery Christmas sun broke across the great gum swamp, lighting the snowy boles and soft-piled limbs of the giant trees with indescribable glory, and pouring a golden flood into the deep spongy bottoms below. It would be a perfect Christmas in the woods, clear, mild, stirless, with silent footing for me, and everywhere the telltale snow.
And everywhere the Christmas spirit, too. As I paused among the pointed cedars of the pasture, looking down into the cripple at the head of the swamp, a clear wild whistle rang in the thicket, followed by a flash through the alders like a tongue of fire, as a cardinal grosbeak shot down to the tangle of greenbrier and magnolia under the slope. It was a fleck of flaming summer. As warm as summer, too, the stag-horn sumac burned on the crest of the ridge against the group of holly trees,—trees as fresh as April, and all aglow with berries. The woods were decorated for the holy day. The gentleness of the soft new snow touched everything; cheer and goodwill lighted the unclouded sky and warmed the thick depths of the evergreens, and blazed in the crimson-berried bushes of the ilex and alder. The Christmas woods were glad.

Nor was the gladness all show, mere decoration. There was real cheer in abundance, for I was back in the old home woods, back along the Cohansey, back where you can pick persimmons off the trees at Christmas. There are persons who say the Lord might have made a better berry than the strawberry, but He didn’t. Perhaps He didn’t make the strawberry at all. But He did make the Cohansey Creek persimmon, and He made it as good as He could. Nowhere else under the sun can you find such persimmons as these along the creek, such richness of flavor, such gummy, candied quality, woodsy, wild, crude,—especially the fruit of two particular trees on the west bank, near Lupton’s Pond. But they never come to this perfection, never quite lose their pucker,
CHRISTMAS IN THE WOODS

until midwinter,—as if they had been intended for the Christmas table of the woods.

It had been nearly twenty years since I crossed this pasture of the cedars on my way to the persimmon trees. The cows had been crossing every year, yet not a single new crook had they worn in the old paths. But I was half afraid as I came to the fence where I could look down upon the pond and over to the persimmon trees. Not one of the Luptons, who owned pasture and pond and trees, had ever been a boy, so far as I could remember, or had ever eaten of those persimmons. Would they have left the trees through all these years?

I pushed through the hedge of cedars and stopped for an instant, confused. The very pond was gone! and the trees! No, there was the pond,—but how small the patch of water! and the two persimmon trees? The bush and undergrowth had grown these twenty years. Which way,—Ah, there they stand, only their leafless tops showing; but see the hard angular limbs, how closely globed with fruit! how softly etched upon the sky!

I hurried around to the trees and climbed the one with the two broken branches, up, clear up to the top, into the thick of the persimmons.

Did I say it had been twenty years? That could not be. Twenty years would have made me a man, and this sweet, real taste in my mouth only a boy could know. But there was college, and marriage, a Massachusetts farm, four boys of my own, and—no matter! it could not have been years—twenty years—since. It was only
yesterday that I last climbed this tree and ate the rich rimy fruit frosted with a Christmas snow.

And yet, could it have been yesterday? It was storming, and I clung here in the swirling snow and heard the wild ducks go over in their hurry toward the bay. Yesterday, and all this change in the vast treetop world, this huddled pond, those narrowed meadows, that shrunken creek! I should have eaten the persimmons and climbed straight down, not stopped to gaze out upon the pond, and away over the dark ditches to the creek. But reaching out quickly I gathered another handful,—and all was yesterday again.

I filled both pockets of my coat and climbed down. I kept those persimmons and am tasting them tonight. Lupton’s Pond may fill to a puddle, the meadows may shrivel, the creek dry up and disappear, and old Time may even try his wiles on me. But I shall foil him to the end; for I am carrying still in my pocket some of yesterday’s persimmons,—persimmons that ripened in the rime of a winter when I was a boy.

High and alone in a bare persimmon tree for one’s dinner hardly sounds like a merry Christmas. But I was not alone. I had noted the fresh tracks beneath the tree before I climbed up, and now I saw that the snow had been partly brushed from several of the large limbs as the ’possum had moved about in the tree for his Christmas dinner. We were guests at the same festive board, and both of us at Nature’s invitation. It mattered not that the ’possum had eaten and gone this hour or more. Such is good form in the woods. He was
expecting me, so he came early, out of modesty, and, that I too might be entirely at my ease, he departed early, leaving his greetings for me in the snow.

Thus I was not alone; here was good company and plenty of it. I never lack a companion in the woods when I can pick up a trail. The 'possum and I ate together. And this was just the fellowship I needed, this sharing the persimmons with the 'possum. I had broken bread, not with the 'possum only, but with all the out-of-doors. I was now fit to enter the woods, for I was filled with good-will and persimmons, as full as the 'possum; and putting myself under his gentle guidance, I got down upon the ground, took up his clumsy trail, and descended toward the swamp. Such an entry is one of the particular joys of the winter. To go in with a fox, a mink, or a 'possum through the door of the woods is to find yourself at home. Any one can get inside the out-of-doors, as the grocery boy or the census man gets inside our houses. You can bolt in at any time on business. A trail, however, is Nature's invitation. There may be other, better beaten paths for mere feet. But go softly with the 'possum, and at the threshold you are met by the spirit of the wood, you are made the guest of the open, silent, secret out-of-doors.

I went down with the 'possum. He had traveled home leisurely and without fear, as his tracks plainly showed. He was full of persimmons. A good happy world this, where such fare could be had for the picking! What need to hurry home, except one were in danger of falling asleep by the way? So I thought, too, as I followed his winding path; and if I was tracking him
to his den, it was only to wake him for a moment with the compliments of the season. But it was not even a momentary disturbance; for when I finally found him in his hollow gum, he was sound asleep, and only half realized that some one was poking him gently in the ribs and wishing him a merry Christmas.

The ’possum had led me to the centre of the empty, hollow swamp, where the great-boled gums lifted their branches like a timbered, unshingled roof between me and the wide sky. Far away through the spaces of the rafters I saw a pair of wheeling buzzards, and under them, in lesser circles, a broad-winged hawk. Here, at the feet of the tall, clean trees, looking up through the leafless limbs, I had something of a measure for the flight of the birds. The majesty and the mystery of the distant buoyant wings were singularly impressive.

I have seen the turkey-buzzard sailing the skies on the bitterest winter days. To-day, however, could hardly be called winter. Indeed, nothing yet had felt the pinch of the cold. There was no hunger yet in the swamp, though this new snow had scared the raccoons out, and their half-human tracks along the margin of the swamp stream showed that, if not hungry, they at least feared that they might be.

For a coon hates snow. He will invariably sleep off the first light snowfalls, and even in the late winter he will not venture forth in fresh snow unless driven by hunger or some other dire need. Perhaps, like a cat or a hen, he dislikes the wetting of his feet. Or it may be that the soft snow makes bad hunting—for him. The
truth is, I believe, that such a snow makes too good hunting for the dogs and the gunner. The new snow tells too clear a story. His home is no inaccessible den among the ledges; only a hollow in some ancient oak or tupelo. Once within, he is safe from the dogs, but the long fierce fight for life taught him generations ago that the nest-tree is a fatal trap when behind the dogs come the axe and the gun. So he has grown wary and enduring. He waits until the snow grows crusty, when without sign, and almost without scent, he can slip forth among the long shadows and prowl to the edge of dawn.

Skirting the stream out toward the higher back woods, I chanced to spy a bunch of snow in one of the great sour gums that I thought was an old nest. A second look showed me tiny green leaves, then white berries, then mistletoe.

It was not a surprise, for I had found it here before,—a long, long time before. It was back in my schoolboy days, back beyond those twenty years, that I first stood here under the mistletoe and had my first romance. There was no chandelier, no pretty girl, in that romance,—only a boy, the mistletoe, the giant trees, and the sombre silent swamp. Then there was his discovery, the thrill of deep delight, and the wonder of his knowledge of the strange unnatural plant! All plants had been plants to him until, one day, he read the life of the mistletoe. But that was English mistletoe; so the boy’s wonder world of plant life was still as far away as Mars, when, rambling alone through the swamp along the creek, he stopped under a big curious bunch
of green, high up in one of the gums, and—made his first discovery.

So the boy climbed up again this Christmas Day at the peril of his precious neck, and brought down a bit of that old romance.

I followed the stream along through the swamp to the open meadows, and then on under the steep wooded hillside that ran up to the higher land of corn and melon fields. Here at the foot of the slope the winter sun lay warm, and here in the sheltered briery border I came upon the Christmas birds.

There was a great variety of them, feeding and preening and chirping in the vines. The tangle was a-twitter with their quiet, cheery talk. Such a medley of notes you could not hear at any other season outside a city bird store. How far the different species understood one another I should like to know, and whether the hum of voices meant sociability to them, as it certainly meant to me. Doubtless the first cause of their flocking here was the sheltered warmth and the great numbers of berry-laden bushes, for there was no lack either of abundance or variety on the Christmas table.

In sight from where I stood hung bunches of withering chicken or frost grapes, plump clusters of blue-black berries of the greenbrier, and limbs of the smooth winterberry bending with their flaming fruit. There were bushes of crimson ilex, too, trees of fruiting dogwood and holly, cedars in berry, dwarf sumac and seedy sedges, while patches on the wood slopes uncovered by the sun were spread with trailing
partridge berry and the coral-fruited wintergreen. I had eaten part of my dinner with the ’possum; I picked a quantity of these wintergreen berries, and continued my meal with the birds. And they also had enough and to spare.

Among the birds in the tangle was a large flock of northern fox sparrows, whose vigorous and continuous scratching in the bared spots made a most lively and cheery commotion. Many of them were splashing about in tiny pools of snow-water, melted partly by the sun and partly by the warmth of their bodies as they bathed. One would hop to a softening bit of snow at the base of a tussock, keel over and begin to flop, soon sending up a shower of sparkling drops from his rather chilly tub. A winter snow-water bath seemed a necessity, a luxury indeed, for they all indulged, splashing with the same purpose and zest that they put into their scratching among the leaves.

A much bigger splashing drew me quietly through the bushes to find a marsh hawk giving himself a Christmas souse. The scratching, washing, and talking of the birds; the masses of green in the cedars, holly, and laurels; the glowing colors of the berries against the snow; the blue of the sky, and the golden warmth of the light made Christmas in the heart of the noon that the very swamp seemed to feel.

Three months later there was to be scant picking here, for this was the beginning of the severest winter I ever knew. From this very ridge, in February, I had reports of berries gone, of birds starving, of whole
coveys of quail frozen dead in the snow; but neither the birds nor I dreamed to-day of any such hunger and death. A flock of robins whirled into the cedars above me; a pair of cardinals whistled back and forth; tree sparrows, juncos, nuthatches, chickadees, and cedar-birds cheeped among the trees and bushes; and from the farm lands at the top of the slope rang the calls of meadowlarks.

Halfway up the hill I stopped under a blackjack oak, where, in the thin snow, there were signs of something like a Christmas revel. The ground was sprinkled with acorn shells and trampled over with feet of several kinds and sizes,—quail, jay, and partridge feet; rabbit, squirrel, and mice feet, all over the snow as the feast of acorns had gone on. Hundreds of the acorns were lying about, gnawed away at the cup end, where the shell was thinnest, many of them further broken and cleaned out by the birds.

As I sat studying the signs in the snow, my eye caught a tiny trail leading out from the others straight away toward a broken pile of cord-wood. The tracks were planted one after the other, so directly in line as to seem like the prints of a single foot. “That’s a weasel’s trail,” I said, “the death’s-head at this feast,” and followed it slowly to the wood. A shiver crept over me as I felt, even sooner than I saw, a pair of small sinister eyes fixed upon mine. The evil pointed head, heavy but alert, and with a suggestion of fierce strength out of all relation to the slender body, was watching me from between the sticks of cord-wood. And so he had been watching the mice and birds and rabbits feasting under the tree!
I packed a ball of snow round and hard, slipped forward upon my knees, and hurled it. “Spat!” it struck the end of a stick within an inch of the ugly head, filling the crevice with snow. Instantly the head appeared at another crack, and another ball struck viciously beside it. Now it was back where it first appeared, and did not flinch for the next, nor the next ball. The third went true, striking with a “chug” and packing the crack. But the black, hating eyes were still watching me a foot lower down.

It is not all peace and good-will in the Christmas woods. But there is more of peace and good-will than of any other spirit. The weasels are few. More friendly and timid eyes were watching me than bold and murderous. It was foolish to want to kill—even the weasel. For one’s woods are what one makes them, and so I let the man with the gun, who chanced along, think that I had turned boy again, and was snowballing the woodpile, just for the fun of trying to hit the end of the biggest stick.

I was glad he had come. As he strode off with his stained bag I felt kindlier toward the weasel. There were worse in the woods than he,—worse, because all of their killing was pastime. The weasel must kill to live, and if he gloated over the kill, why, what fault of his? But the other weasel, the one with the blood-stained bag, he killed for the love of killing. I was glad he was gone.

The crows were winging over toward their great roost in the pines when I turned toward the town. They, too, had had good picking along the creek flats and
ditches of the meadows. Their powerful wing-beats and constant play told of full crops and no fear for the night, already softly gray across the white silent fields. The air was crisper; the snow began to crackle under foot; the twigs creaked and rattled as I brushed along; a brown beech leaf wavered down and skated with a thin scratch over the crust; and pure as the snow-wrapped crystal world, and sweet as the soft gray twilight, came the call of a quail.

The voices, colors, odors, and forms of summer were gone. The very face of things had changed; all had been reduced, made plain, simple, single, pure! There was less for the senses, but how much keener now their joy! The wide landscape, the frosty air, the tinkle of tiny icicles, and, out of the quiet of the falling twilight, the voice of the quail!

There is no day but is beautiful in the woods; and none more beautiful than one like this Christmas Day,—warm and still and wrapped, to the round red berries of the holly, in the magic of the snow.
